

# Microsoft Office 365 Plans

## Do Better Business

As a small or midsize business, RDI understands that you need affordable and professional IT tools. Microsoft Office 365 gives you and your employees access to popular productivity applications, including Microsoft Word, Excel, and PowerPoint, anytime, from virtually anywhere. We empower you to take advantage of built-in enterprise-grade services such as high-definition video conferencing, business-class email, and portals for file sharing.

Whether it's a PC, Mac, laptop, tablet, or smartphone, stay productive and collaborate with tools that are easy to set up and use. Regardless of where you are or what time it is, you can access and edit Word files, Excel spreadsheets, and PowerPoint presentations – and also host HD conferences and share files on a portal. We help to personalize application settings to roam with you as you work. Office 365 keeps your content and formatting intact; no more redoing work as you transition between devices and locations.

**As a Microsoft Partner of many years, we are able to offer Microsoft Direct pricing.**

### Be Well-Protected

With always up-to-date anti-malware and anti-spam protection, get a uptime guarantee for your Office 365 service that's backed by a service level agreement.

### Save Money

Office 365 provides an affordable price point for core IT tools, so you don't have to invest in additional servers, storage, software, or IT staff.

### Get The Support You Need

With RDI's fully managed Office 365 services, you have web and phone support for all critical issues to quickly answers to questions or resolve issues.

## Protection for Office 365 Data

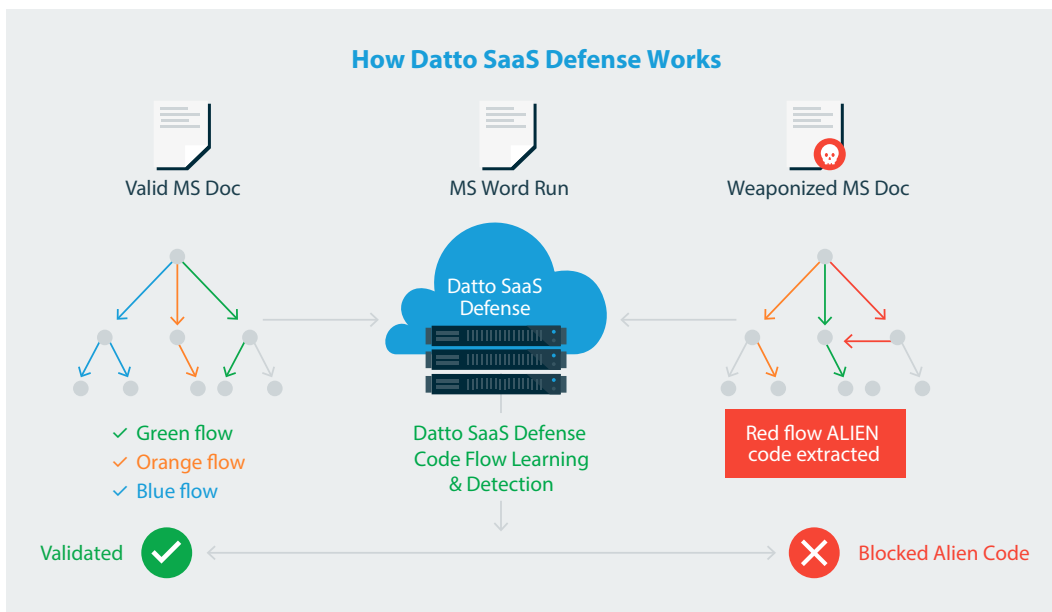

Although Microsoft is accountable for securing its hardware and software, users are responsible for securing their data. Microsoft does not fully protect against data loss and has limited recovery options.

Protect your critical data in Microsoft 365 and Google Workspace applications with Datto SaaS Protection, a robust cloud-to-cloud backup solution. It provides automatic three-times-daily backups, flexible data retention, and easy one-click restores at the file or folder level. Users can also restore data to the original device or other user accounts, ensuring efficient recovery.

## Data Security & Peace of Mind

Datto SaaS Protection further enhances data security by protecting against permanent data loss and offering swift recovery from any cause of data loss. With a single dashboard to manage backups, easily streamline operations, reduce business risk, and save time and money.

Datto SaaS Protection bridges the gap in cloud data protection. Its robust features, including flexible retention options, secure cloud storage, and encryption, ensure data is safeguarded effectively, boosting productivity, and reducing potential risks. Setup takes just five minutes, and the solution is compliant with GDPR and SOC2 Type II standards, providing peace of mind.

## Effortless Cyber Defense

Effortlessly raise your cybersecurity efforts to the next level with Datto SaaS Defense. SaaS Defense is an ATP, impersonation detector, and spam filtering solution that defends against malware, phishing, and business email compromise (BEC) attacks.

Unlike other solutions, SaaS Defense detects unknown threats upon the first encounter across the Microsoft 365 suite by analyzing the composition of a safe email, chat, or document instead of looking for already known threats. This shortens the detection time and tightens your overall cybersecurity.

## Ignoring Backup & Recovery is Risky for Resilience, Continuity, & Productivity. Add SaaS Protection & Defense to Your Office 365 For:

### Maximized Protection

Protect against data loss and recover from user-error or ransomware quickly

### Improved Efficiency

Recover quickly and manage all of your backups from one dashboard

### Peace of Mind

Not only can you reduce risks but you can also save valuable time and money.
